

IEEE STUDENT BRANCH EVENTS

2025-2026 SEMINARS, CONFERENCES, AND TECHNICAL TOURS

November 5, 2025: Mersin Teknopark Tour

A technical visit was organized to the Mersin Technopark campus to examine the entrepreneurial ecosystem and local technology development activities. The R&D projects, innovation-focused work models, and university-industry collaboration processes of the companies operating within the Technopark were examined on-site.

December 4, 2025 Şişecam Technical Tour

During a visit to the production facilities of Şişecam, one of the leading companies in the glass industry, the entire process of industrial glass production was observed firsthand. Comprehensive information was obtained from technical staff regarding raw material preparation, firing, and shaping processes, as well as quality control systems.

December 4, 2025: Enerjisa Recruitment and Knowledge Sharing Panel

An informational meeting was held with Enerjisa officials to analyze career opportunities and professional expectations in the energy sector. During the session, strategic insights were shared regarding hiring criteria, competency-based interview techniques, and the development processes for engineering candidates.

December 15, 2025 IEEE Quiz Night

A comprehensive trivia contest was organized with the aim of strengthening communication among student community members and integrating general knowledge with technological data. Conducted within a teamwork framework, the event featured assessments covering a wide range of topics, from engineering terminology to general knowledge.

December 17, 2025 Koluman Tea Talk

During the interactive discussion, which was held with the participation of representatives from Koluman, current engineering approaches in the automotive and defense industries were discussed. Career planning strategies and practical solutions encountered in professional life were shared with the students in a friendly and open dialogue.

December 18, 2025 Python Programming Training

We conducted a hands-on training program on the Python programming language, which is used in engineering calculations and data analysis. By covering a wide range of topics-from basic syntax to algorithm development-we gained practical experience with methods that will help us bring our technical projects into the digital world. With a particular focus on automation solutions, we took steps to enhance efficiency in our academic work.

December 29, 2025 Excel Training

A hands-on training program on Excel-a software tool of critical importance in engineering reporting and data management-was conducted. The program focused on methods to enhance efficiency in academic and professional work through data analysis, complex formulas, and techniques for creating dynamic tables.

February 17, 2026 TechVision II Summit

The second TechVision summit, where technological transformation and future engineering trends were discussed at a professional level, has been held. Technical presentations by industry professionals on digitalization, artificial intelligence integration, and innovative engineering solutions were presented to participants on an academic platform.

February 24, 2026 Arbella Technical Tour

A technical tour was conducted at the Arbella facilities to examine automation and sustainable production lines in food manufacturing. The industrial control systems, hygienic production standards, and logistics management processes at the facility were analyzed from an engineering perspective.

April 16, 2026 Koluman Technical Tour

A technical visit was organized to the Koluman production plant to observe the manufacturing processes for heavy-duty vehicles and special-purpose vehicles. All technical procedures, from design to the assembly line, as well as defense industry-focused engineering projects, were inspected on-site and documented in a report.

April 21, 2026 Temsa Technical Tour

The visit to the Temsa Adana facilities, which showcase innovative production techniques and vehicle technologies in the automotive industry, has been completed. On-site inspections were conducted regarding the level of automation on the bus production lines, engineering design criteria, and technological R&D activities in the sector.

April 27, 2026 Aves Technical Tour

A visit was conducted to the Aves factory, which covers industrial facility management and vegetable oil production technologies. Technical details regarding energy recovery, extraction units, and the automation hierarchy at the factory were observed under the guidance of authorized engineers.
